Abstract

From the depths of the oceans to the most remote places on Earth, from the ground to the moon, human exploration has provided knowledge relating to Humanity, but also the awareness of dangers and potential risks that it involves. Space medicine study the dangers, safety and performance of humans including astronauts living and working in extreme environments, for example, mountaineers in high altitudes and future space travelers.

A short bio

Jesus A. Guerra Rivera is Mexican physician from Monterrey, Mexico. He obtain his medical degree at Universidad Autónoma de Nuevo Leon (UANL) in Mexico and his Master in Science in Aerospace medicine at Wright State University in Ohio, USA. He has taken courses in mountain rescue and remote rescue (Mexico), also certificate courses in Emergency medicine (UNAM, Mexico) and open water diver license (PADI). Experience working in internal medicine and emergency hospital floors, and professor of Universidad Autónoma de Coahuila (UAdeC) for master degree level. Member of Aerospace Medicine Association, Asociación Iberoamericana de Medicina Aeroespacial, Asociación Mexicana de Aviación A.C. and Colegio Mexicano de Medicina Aeroespacial A.C. Actually, Aerospace Medicine online professor at Mars-Moon Astronautics Academy & Research Science (MMAARS). He has also participate in MMAARS research projects and activities.
